SINCE the dawn of civilization man has grieved for the loss of his loved ones and sought to secure their remains permanently against defilement.

Expensive mausoleums, crypts and vaults could but partially satisfy this desire, and even these imperfect arrangements have been within the reach of only the very rich.

The entire fulfilment of this natural and proper desire is now possible. The product made under the DeCamp patents places within the reach of all, rich and poor, a burial casket which is at the same time an absolutely durable and impervious vault.
The CRYSTAL GLASS CASKET COMPANY

WASHINGTON, D. C.
605 FIFTEENTH STREET N.W.
DIRECTLY OPPOSITE THE UNITED STATES TREASURY

INCORPORATED UNDER THE LAWS OF DELAWARE
CAPITAL STOCK $1,000,000.00

A wonderful industry with a new product—which is rapidly advancing into a business of great magnitude and promises remarkable returns on the investment. The information, facts and illustrations herewith given will be gratifying to present stockholders and extremely convincing to those not yet affiliated with this fast-growing institution.
THE AMERICAN GLASS CASKET COMPANY'S PLANT AT ADA, OKLAHOMA

This was the first Company organized to operate under the DeCamp Patents and all the commercial sized caskets shown in this booklet were manufactured at this plant. This company owns and controls the right to manufacture Glass Caskets under the DeCamp patents in the States of Oklahoma, Texas, New Mexico and Arkansas.

The Crystal Glass Casket Company of Washington, D.C. will build a plant similar to the one illustrated above for the manufacture and sale of Glass Caskets in its exclusive territory, which includes the District of Columbia and the States of Delaware, Maryland, Virginia, West Virginia and Kentucky.
The Product

A COMBINED Casket and Vault, made of two solid pieces of glass hermetically sealed. Impervious to air, water, mud and vermin, and will for all time resist the action of every destroying element to which burial caskets are exposed.

The beautiful effect of interior and exterior trimmings, together with the universally acknowledged merits of the Glass Casket, places it beyond comparison with any burial case ever produced, and at a price within the reach of all.

It is the only casket which can be readily adapted for the production of special designs in cut glass for those who desire a more elaborate burial casket. It can be trimmed inside with plush, velvet, or other luxurious materials; and these can be seen through the glass, thus adding to the richness of effect. These materials can bear, if desired, the insignia of religious, fraternal, or other organizations, embroidered in gold or silver; or have designs in any other respect compatible with the most costly funerals of the wealthy. Yet the Glass Casket is available to people whose resources are restricted.

Most important of all, it appeals to the heart. It is indeed a "couch magnificent," a splendid last tribute to the beloved dead. In its rich elegance, in its pleasing symmetry of outline and striking beauty of proportion, it is like a great jewel clasped in bands of fine silver or gold.
A SAMPLE IN WHITE

This shows a Casket made of opal glass and sand blasted, which produces the soft, white, downy effect so much preferred in small-size Caskets.

The Market

THE market for our product is not affected by the many conditions confronting most industrial commodities. The demand for burial caskets does not have to be created. It exists and will continue to exist, and this demand is always for the very best obtainable. The Glass Casket is not only the best casket at any price, but the price is also within the reach of the people.

Seldom, if ever, has there been perfected an invention possessing the financial possibility of this much needed article. You must confess that it appeals to you in the strongest possible way, both as a preferred article in time of its need and as a financial proposition at present, realizing as you do the combination of vault and casket in one, which gives the Glass Casket 50% the advantage over all others. Remember, when it becomes necessary for us to buy a casket, we are all affected in the same way—we all act alike—and in this respect we do the very best we can, therefore we all reach the same opinion, since there is nothing to take the place of, or compare with, the Glass Casket.
Why There Is a Market for the Glass Casket

The mausoleum is a financial success, even though the crypts range in price from $200 to $1000 each. Did you ever ask yourself why?

The wealthy lay their loved ones away in this manner, realizing that it is the only means by which the body of the one they loved so much can be protected from mud, water and vermin.

The poor man loves his family as dearly as the man worth a million. However, as the resources of about 75 per cent of the people are by comparison very restricted, he is compelled to lay his loved ones away in a wooden casket, with feelings too sad for tongue or pen to describe.

The Glass Casket is just as good as a crypt in a mausoleum; if anything, it is more permanent when put in the ground, and can be sold at a price so reasonable that it is within the means of all.

Under these circumstances what per cent of the public, in your opinion, will demand Glass Caskets?

Location of Plant

The factory of the Crystal Glass Casket Company will be located at the most advantageous point within the territory of the Company, where 10 to 15 acres of land can be secured upon which to erect the plant, due consideration being given to shipping facilities, and proximity of fuel and sand for making the glass. It is our intention to begin building as soon as $100,000 of company funds are available for that purpose. The actual manufacture of caskets will commence at the earliest possible moment.

In our territory there is an abundance of raw material for the manufacture of glass.
Caskets in the three sizes shown above are on display in the office of the Crystal Glass Casket Company, Washington, D.C. Stockholders and all others are cordially invited to call and examine them. It has been remarked by many that to look upon glass caskets does not cause the feeling of mental depression which some persons experience in viewing caskets.
The Glass Casket

The Glass Casket is not only a burial case, but a combined casket and vault, and is in every practical sense indestructible. It is made of two solid pieces of glass—the lid and the body. The lid is so moulded that a tongue is formed at its lower edge or rim, while the body is so moulded that a groove is formed around the upper edge of the top.

The tongue of the lid fits into the groove of the body all the way around, thus giving the same effect as do the tongue and groove in flooring boards. This joint is hermetically sealed by applying a composition which renders the casket air-tight, water-tight, vermin-proof and absolutely sanitary, thus assuring a perfect burial receptacle.

Materials used in the building of all other caskets will deteriorate and crumble away in a comparatively short time, with results which are anything but pleasant to contemplate. Glass, however, is not in any degree affected by the elements which destroy wood and metal in the ground, and, furthermore, tests made by the United States Geological Survey show that the tensile strength of glass is greater than that of granite and ranges from six to ten thousand pounds per square inch.

The handles and hinges are fastened on the exterior metal bands. These bands, handles and hinges are independent of the casket itself, being held in place by the conformation of the casket. This eliminates the drilling of holes through the glass, which would otherwise be necessary. The bands are underlaid with a cushion of felt to prevent the metal from coming in contact with the glass. This felt in harmonious colors adds to the artistic appearance of the casket. In time the metal bands will rust away, but this will not in the slightest degree affect the casket itself, since it will still remain a hermetically sealed vault of glass.

Each Glass Casket is made with a false bottom of wood held securely in place by the metal bands. This provides not only a secure carrier when the casket is lifted by the handles, but it is also a protection to the glass bottom from the hearse rollers and church pedestals, thus making it as practical to handle as a wood casket.

The price of the Glass Casket is governed by its size, design and trimming. Both the exterior and the interior are adaptable for the most elaborate as well as moderate decoration, and the caskets can be furnished in special exterior designs in cut glass. The least expensive will surpass in appearance and merit any wood or metal casket and can be sold at about the same price as a wood casket.

It must be acknowledged that the Glass Casket is beyond all comparison with caskets of other materials and is in every respect the last word in both quality and appearance in burial cases.
AMERICAN GLASS CASKET COMPANY’S PLANT AT ADA, OKLAHOMA
This was the first Company organized under the DeCamp Patents. This plant is now in operation, and the larger caskets shown on other pages in this booklet were manufactured there. Its territory includes Oklahoma, Texas, New Mexico and Arkansas. This plant is over 600 feet in length.

FIRST UNIT OF THE MID-WEST GLASS CASKET COMPANY’S PLANT AT MUSKOGEE, OKLAHOMA
This plant was built for the manufacture of Glass Caskets under the DeCamp patents. The territory of this company includes the States of Kansas, Nebraska, Iowa and Missouri. This plant is 250 feet in length and fire proof throughout.
A partial view of the Pacific Glass Casket Company’s plant at Santa Monica, California, chartered to operate under the DeCamp Patents in the states of California, Oregon, Utah, Nevada, Arizona, Idaho, Washington, Alaska, Hawaiian Islands and the western half of Colorado. The length of this plant is 220 feet.

The first unit of the DeCamp Glass Casket Company’s plant at Chattanooga, Tenn.

This plant, too, was built for the manufacture of Glass Caskets under the same patents, for the States of Tennessee, North and South Carolina, Georgia, Florida, Alabama, Mississippi and Louisiana. This plant is over 400 feet long, principally fire proof. All plants were built new for the manufacture of Glass Caskets under the DeCamp Patents.
Capitalization

The Crystal Glass Casket Company is organized under the laws of Delaware with a capitalization of $1,000,000, divided into 100,000 shares of a par value of $10.00 per share. It is all common stock, therefore all stockholders share the profits in exact proportion to the number of shares they own. When the subscriber has paid in full for his stock, he assumes no further liability, as the stock is then fully paid and non-assessable. A limited number of shares of the capital stock of the company is now being offered at par, that is, at $10.00 per share. This price, however, is subject to advance without notice, and will advance according to the history of the other Glass Casket Companies.

Terms on Which Stock Is Sold

If full cash payment is made, stock certificate will be issued at once. A subscriber may, however, pay one-half in cash and the balance in three equal installments secured by notes due respectively 30, 60 and 90 days from date. When the stock is purchased in this manner, the stock certificate will be delivered to the purchaser when all deferred payments are made. No stock has ever been sold by the Crystal Glass Casket Company for less than par value.

Production and Profit

The territory of the Crystal Glass Casket Company has a population of about 8,000,000. Approximately 16,000 caskets are used annually to each million of population; therefore, within the territory of this company, there is a yearly demand for 128,000 caskets. This would require the manufacture of 426 caskets per day, working 300 days in the year, to supply the demand for caskets in this territory.

With a sale of 426 caskets each working day, the business of the Company would give a profit of $4260 per day, if an average profit of only $10 is figured on each casket. At an average profit of $20 per casket (which in our judgement would be very conservative) the Company would make a profit of $8,520 per day. The profit for a year on the 426 caskets per day, or 128,000 caskets annually, at $20 profit per casket, would amount to $2,560,000. This would enable the Company to pay a dividend of more than 250 per cent on its total capitalization, in which case each stockholder would receive $250 each year for each $100 in par value of stock held by him.

Of course no one can assure you that our Company will secure all this business, but your own careful examination of our product and the opinion of your friends relative to the unsurpassed advantages of the Glass Casket will assist you in deciding for yourself what per cent of the caskets used will be Glass Caskets.
The Largest Glass Press Ever Constructed in this Country

This enormous machine was especially built by Mr. Wm. J. Miller, Swissvale, Penna., for the manufacture of the DeCamp Glass Burial Caskets. It is fully protected by patents which are owned and controlled by Mr. J. W. DeCamp, and all companies operating under his patents have the free and unrestricted use of this machine for the manufacture of Glass Caskets.

Its height is 13 feet, length 25 feet, width 5 feet, with a stroke of 18 inches. Its weight is 31,000 pounds. It is capable of developing a pressure of 700 tons, and is adjustable for the making of all sizes of Glass Caskets.

The one shown on this page is installed and in operation in the plant of the American Glass Casket Company, Ada, Oklahoma.

A similar press will be constructed and installed in our plant when completed.
The Territory
of the
Crystal Glass Casket Company

The Crystal Glass Casket Company owns and controls the sole and exclusive right to manufacture and sell in the District of Columbia and in the states of Delaware, Maryland, Virginia, West Virginia and Kentucky, the Glass Caskets made in accordance with the DeCamp patents issued by the United States Patent Office.

This territory has about eight million inhabitants and is one of the richest sections in the United States. Approximately 16,000 caskets are used annually to each million of population, therefore, within the territory of the Crystal Glass Casket Company, there is a yearly demand for about 128,000 caskets. This would require the manufacture of 426 caskets per day, working 300 days in the year, to supply the demand for caskets in this territory.
Management of the Company

BOARD OF DIRECTORS

The Board of Directors consists of five members who give their time and best efforts as directors without compensation. The only officers who receive any compensation for their services are the Vice-President and the Secretary-Treasurer, who devote their entire time to the Company's interests. Their compensation is conservatively fixed by the Board of Directors.

THE BOOKS

Our Books are open at all reasonable times to the stockholders. They are cordially invited to visit the office where a fine display of real Glass Caskets will be found for their examination. Such a visit, by a stockholder or a prospective stockholder, will better demonstrate the remarkable commercial possibilities of this great enterprise than anything printed in this booklet.

PROTECTION TO STOCKHOLDERS

Every share of stock, whether held by the small or the large investor, will participate equally in all dividends. Each share has the same voting power, but as a safe-guard to the small investor, we have incorporated in our by-laws a clause which provides that no stockholder of this corporation shall ever vote, as owner or by proxy, or both, more than 10% of the issued capital stock of the company.

STOCK SALESmen

We endeavor to have associated with us only salesmen of the most reliable class; however, we especially emphasize that no authority is given any salesman or agent of the Crystal Glass Casket Company to make any agreement, statement or representation which conflicts with the literature and contracts used and approved by the Company.

Built exclusively for the manufacture of Glass Burial Caskets under the DeCamp Patents.
Why You Should Invest Now

WORK is undoubtedly the foundation of fortune. But if you never build upon the foundation, if all you do is work, and you never invest your earnings, you may work until death without having more than a few dollars laid away. Your earnings invested with judgment and foresight will earn you wealth. When you invest, use your best judgment and foresight, select a good staple industrial enterprise, then act. If you wait until you see if it "pans out all right," your opportunity will be lost.

DETROIT, Sept. 24.—Mayor James Couzens, former general manager of the Ford Automobile Company, yesterday, received approximately $29,500,000 for 2,180 shares of stock reported to have originally cost him about $2,500. Through the deal Henry Ford and Edsel Ford became sole owners of the Ford properties.

The above news dispatch (quoted from a Washington, D. C. newspaper of September 24, 1919) indicates that one man who had faith in the early days of the Ford Automobile, has received $11,800 for each dollar he invested, and this is in addition to the large dividends which the stock in the meantime has been paying.

The Glass Casket compares most favorably with the Ford Automobile in its possible ultimate development.

The following quotations are attributed to some of those who have made fortunes:

Hetty Green stated: "The way to get rich is to invest in necessities."

Alexander Graham Bell points out the advisability of "finding the newest business invention and buying stock."

Westinghouse insists that "Five thousand Americans are worth a million dollars each because they invested their earnings in new things."

The opinion of J. P. Morgan is that "The foundation of wealth is the first $100.00 well invested."

Chauncey M. Depew has said, "Buy when the stock is first offered."

Quoting John D. Rockefeller we add—"Do not delay! Get in while you can. The unwise man thinks a thing worthless or it would not be offered to him."

Consider Carefully the Information on this Page

The table given below shows the possible results from an investment in the stock of the Crystal Glass Casket Company.

Our capitalization is $1,000,000. The estimated population of the territory in which we can market our product is approximately 8,000,000. Statistics show that the annual death rate is about sixteen to the thousand, which would be approximately 128,000 annually in our territory. When our plant is operated at its full capacity we expect to show a profit of at least ten dollars per casket, and we believe that this profit can easily be doubled.

For example: In order to estimate the possibilities more plainly let us figure the entire business, with a profit of $20 per casket. This would amount to $2,560,000.00 profit per year, which would pay a dividend of 25% on the entire capitalization. Suppose only one-half the business is obtained—your profit would be $1,280,000.00, or 125%. Make it one-fourth the business and the profit would be $640,000.00, or 62½%. Reduce the estimate as much as you like and see what can be done. We do not claim all the business, but the favorable opinion of your many friends regarding the Glass Casket will enable you to decide for yourself what per cent of the caskets used will be Glass Caskets.

Please note the possible returns as indicated by the following table:

A simple and convincing argument with regard to the weight of glass required for a six-foot Glass Casket is as follows:

A six-foot wood casket contains about forty-eight square feet of lumber. A cubic foot of glass weighs approximately 150 pounds. Allowing a uniform thickness of one-half inch of glass for our casket, it would require two cubic feet of glass, cut into twenty-four one-half inch slabs, to equal the required forty-eight feet of surface measurement. As each of the two cubic feet of glass weighs 150 pounds, approximately 300 pounds of glass is required for a six-foot casket.
A CORNER OF THE TRIMMING ROOM OF THE AMERICAN GLASS CASKET COMPANY
In this room all caskets are trimmed and made ready for delivery.

Patent Protection

Patent protection, in the fullest attainable degree, is thrown around our operations by the series of DeCamp United States Patents, as shown by the dates and numbers on page 20 of this booklet. The vast importance of the inventions entering into the construction of this casket may be judged by the fact that seventeen foreign patents have already been issued and others pending.
THE CRYSTAL GLASS CASKET COMPANY, WASHINGTON, D. C.

Further Important Reasons Why This Stock Should Develop Extraordinary Value

THE Crystal Glass Casket Company has secured by contract the exclusive right for the manufacture and marketing of the DeCamp Glass Burial Caskets in the District of Columbia and several adjoining states.

As these caskets can be hermetically sealed, are practically indestructible, and are priced to suit all classes, there can be no doubt as to the future demand for them.

Their price, governed by size, design and trimming, runs as low as for good grades of wood caskets, and is, therefore, within the means of all classes.

According to mortuary statistics, 426 caskets per day, approximately, are required for the burials occurring within our territory, and even if we only supply twenty-five per cent of that number, our net profit would be at least $640,000 per year, counting only 300 working days, and on a basis of $20 profit per casket.

Regarding the future market for our stock, we call your attention to certain facts relative to the stock of six other companies which were organized for the manufacture and marketing of these caskets in other territory:

1st. The American Glass Casket Company of Ada, Oklahoma: The stock of this company advanced from $10 per share to $25 per share in less than two years.

2nd. The Mid-West Glass Casket Company of Muskogee, Oklahoma: Stock of this company advanced from $10 to $20 per share.

3rd. The Pacific Glass Casket Company of Santa Monica, California: Their stock has advanced from $10 to $20 per share.

4th. The DeCamp Glass Casket Company of Chattanooga, Tennessee: Their stock has advanced from $10 to $15 per share.

5th. The Northern Glass Casket Company of Minneapolis, Minnesota: The stock of this company is $10 per share.

6th. The Central Glass Casket Company of Detroit, Michigan: This Company was recently organized and their stock is at present $10 per share.

Can there be any doubt as to the future market for our stock?
Mr. J. W. DeCAMP

Of Blackwell, Oklahoma, the Inventor and Patentee of the Glass Burial Casket. As an undertaker, Mr. DeCamp conceived the idea of the Glass Casket to meet the constant demand for some durable burial case at a price within the reach of all.

THE CRYSTAL GLASS CASKET COMPANY owns the exclusive right to manufacture and sell in the District of Columbia, and in the States of Delaware, Maryland, Virginia, West Virginia and Kentucky, the Glass Caskets made in accordance with the DeCamp patents, numbered and dated as follows: 1,123,856, Jan. 5th., 1915; No. 1,192,169, July, 25 1916; No. 1,211,684, Jan. 9, 1917; No. 14,357, Sept. 11, 1917; No. 1,292,268, Jan. 21, 1919. Other patents pending. These patents assure protection in the fullest attainable degree.
The DeCamp Glass Casket

A WONDERFUL new product which fills perfectly every requirement for which it was created. The fact that it will, for all time, shield and protect the remains of the dear one, who has just been taken from you, makes it a jewel of great worth and a God’s blessing to humanity. Therefore, we sincerely ask the public everywhere to stand firmly for its support and maintenance.

Not to our knowledge has an invention of such importance and magnitude made more rapid progress in so short a time, the facts concerning which are clearly demonstrated in this booklet. This is due solely to its great merits and the universal admiration of the public, who appreciate its superiority at a glance. Its durability, impenetrability, attractive appearance and sanitary features make it an absolute necessity to the civilized world.
Mr. J. W. DeCamp,
Union Bank Bldg.,
Pittsburgh, Pa.

Dear Sir:

Yours of 16th duly received.

We note your acknowledgment of receipt of the opinion prepared concerning your patents and you are assured that the decidedly favorable character of that opinion is a matter of very great gratification to us as well as to you.

As you have of course observed in reading the opinion, our investigation not only shows that the claims of your patents Nos. 1,183,656 and 1,192,169, and of your allowed application serial No. 40,999, are valid, but that the use of the structure covered by the claims of said patents and said allowed application is not an infringement of any patent or patents.

Moreover, your patents, in view of the strength of their claims, will serve to fully cover and protect your rights.

In view of these facts, and the unquestioned commercial importance of your inventions, your patents should prove very highly valuable from a financial standpoint and you have our best wishes for the greatest degree of deserved success to which you are entitled.

With kindest regards, we remain,

Very truly yours,

[Signature]

R.S. & A. B. LAGEY

The above letter is the essence of an examination made by our patent lawyers in the United States Patent Office at Washington, D. C. It is evidence of the fact that our rights are fully protected by the various claims allowed in the DeCamp patents by the United States Patent Office.
The United States of America

To all to whom these presents shall come:

Whereas JAMES W. DE CAMP,

of Blackwell, Oklahoma,

has presented to the Commissioner of Patents a petition praying for the grant of Letters Patent for an alleged new and useful improvement in CASKET-CARRYING HARNESS,

he having assigned one-fourth of his right, title, and interest in said improvement to Charles E. De Camp, of Blackwell, Oklahoma, and one-fourth to John P. Miller, of Muskogee, Oklahoma,

whereas a description of which invention is contained in the specification of which a copy is hereunto annexed and made a part hereof, and has complied with the various requirements of law in such cases made and provided, and

whereas upon due examination made the said claimant is adjudged to be justly entitled to a patent under the law.

Now therefore these Letters Patent are to grant unto the said James W. De Camp, Charles E. De Camp, John P. Miller, their heirs or assigns for the term of SEVENTEEN years from the twenty-first day of January, one thousand nine hundred and nineteen,

the exclusive right to make, use and vend the said invention throughout the United States and the Territories thereof.

In testimony whereof I have hereunto set my hand and caused the seal of the Patent Office to be affixed in the District of Columbia this twenty-first day of January, the year of our Lord one thousand nine hundred and nineteen, and of the Independence of the United States of America the one hundred and forty-third.

CASKET MACHINE IN OPERATION

The above cut shows the big casket machine in operation at Ada, Oklahoma (which can be better seen on page eleven). It is capable of pressing any size casket, base or lid, at the rate of about 12 to 15 per hour.

Study these pictures carefully. To manufacture glass caskets is by no means complicated, as you will note from the different operations, sizes and styles on this page and others in this booklet.

Glass Caskets are an absolute reality and are coming into actual commercial use as rapidly as the hampered conditions of deliveries for machinery and raw materials will permit.

It should be remembered that the assets of the Crystal Glass Casket Company, however great, belong to the stockholders and you should give your officers every assistance possible. They are working for you.

FIRST METHOD USED IN ANNEALING THE CASKETS

From this annealing oven they are ready for trimming; no grinding or polishing necessary.

All of the officers are well known in Washington, D. C., and references of the highest character, including bank references, will be cited on request.

We invite your careful investigation as to the standing and integrity of the officers, as well as to the merits and progress of the Glass Casket business; best of all visit, personally, the office of the Crystal Glass Casket Company, where you will find congenial gentlemen who will be pleased to explain the proposition to you in detail.
Read Carefully

If you have not read this prospectus carefully, do so. Weigh the facts and be convinced that even though you are able to buy very few shares of Crystal Glass Casket Stock, no other investment is likely to return greater profit.

CRYSTAL GLASS CASKET—A Combined Casket and Vault made of two solid pieces of glass hermetically sealed. Impervious to air or moisture. Will never rust or decay. Beautiful effect of interior trimming results from transparency of glass. The market for this extraordinary invention is unlimited and not affected by strikes, styles, panics or drouths.

Write us for any further information you may desire, or call at our office and see sample caskets.

CRYSTAL GLASS CASKET COMPANY
605 15th Street Northwest
Washington, D. C.

January, 1920

DIRECTLY OPPOSITE THE UNITED STATES TREASURY
Mr. R.L. Miller,

Timberville, Virginia.

Dear Sir,-

In compliance with your request, I am sending you under separate cover a prospectus, giving you some information that will give you a better idea of the proposition that we spoke about.

In case of your coming to Washington soon, call for me at our office and I will be glad to show you in detail all that I can in regard to the casket and company. I will likely be up that way within a month and hope that you will be able to see your way clear to an investment as well as telling some more of the business men of your locality of our proposition and interesting them in it.

Remember that I am at your service for further information at all times, and shall expect to hear from you in person or by letter whenever you want to know more about it.

With kindest personal regards, I am

Very truly yours,

[Signature]
